Project Design Phase-II
Technology Stack (Architecture & Stack)

Date	31 October 2022
Team ID	PNT2022TMID29912
Project Name	Project – Smart farmer-Iot Enabled smart Farming Application
Maximum Marks	4 Marks

Technical Architecture:

S.No	Component	Description	Technology
1.	User Interface	How user interacts with application e.g. Web UI, Mobile App, Chatbot etc.	HTML, CSS, JavaScript / Angular Js / React Js etc.
2.	Application Logic-1	Logic for a process in the application	Java / Python

3.	Application Logic-2	Logic for a process in the application	IBM Watson STT service
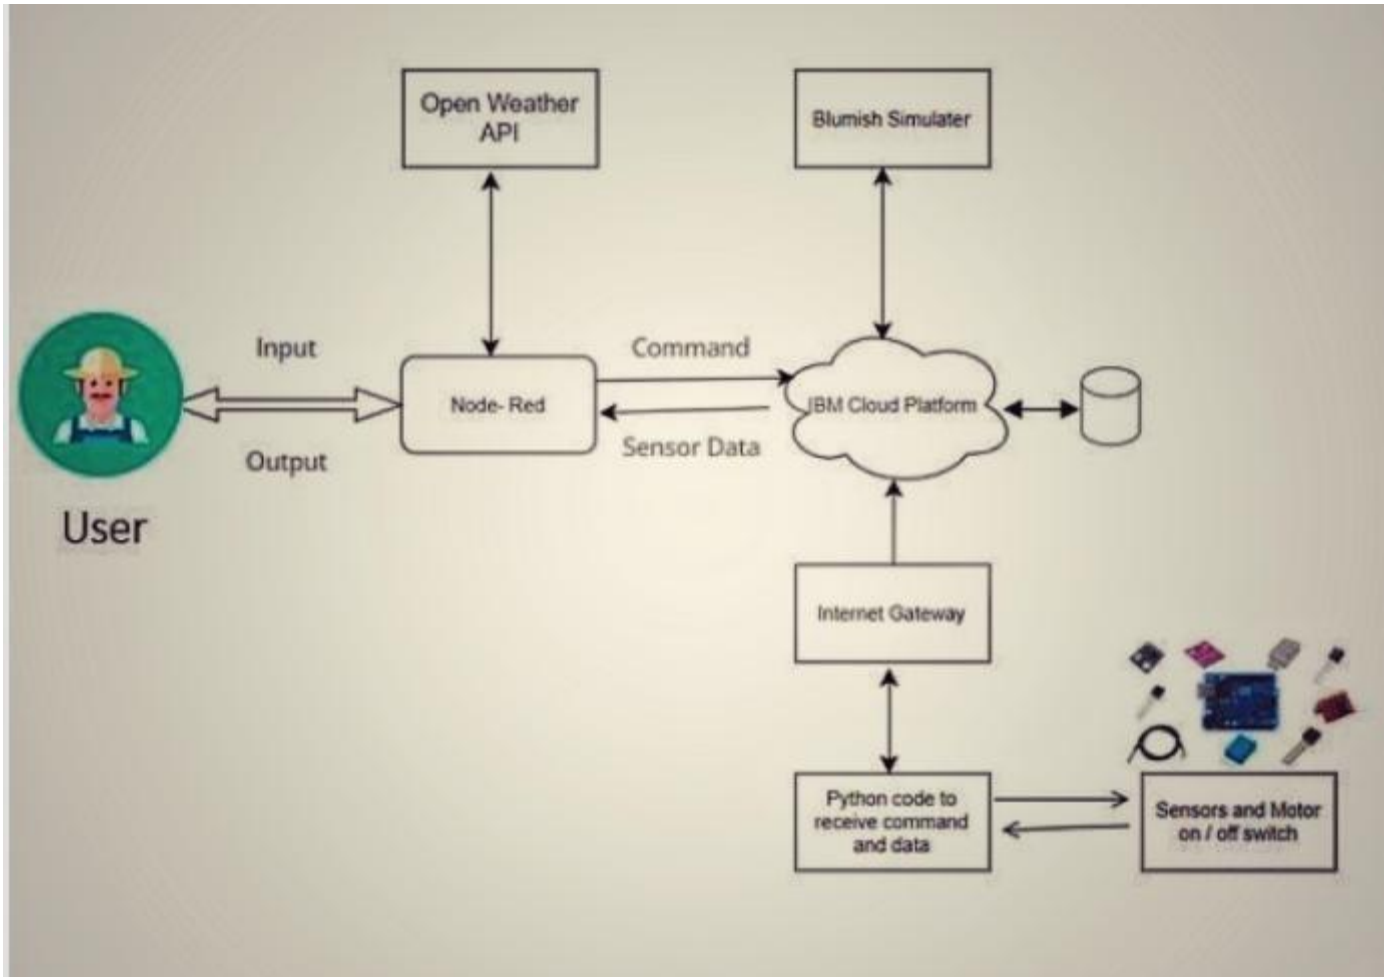

- The different soil parameters temperature, soil moistures and then humidity are sensed using different sensors and obtained value is stored in IBM cloud.
- Arduino Uno is used as a processing unit that process the data obtained from the sensors and weather data from the weather API
- NODE-RED is used as a programming tool to write the hardware, software and APIs. The MQTT protocol is followed for the communication.
- All the collected data are provided to the user through a mobile application that was developed using the MIT app inventor. The user could decide through an app, whether to water the crop or not depending upon the sensor values, By using the app,they can remotely operate the motor switch(On/off).

Table-1 : Components & Technologies:

4.	Application Logic-3	Logic for a process in the application	IBM Watson Assistant
5.	Database	Data Type, Configurations etc.	MySQL, NoSQL, etc.
6.	Cloud Database	Database Service on Cloud	IBM DB2, IBM Cloudant etc.
7.	File Storage	File storage requirements	IBM Block Storage or Other Storage Service or Local Filesystem
8.	External API-1	Purpose of External API used in the application	IBM Weather API, etc.
9.	External API-2	Purpose of External API used in the application	Aadhar API, etc.
10.	Machine Learning Model	Purpose of Machine Learning Model	Object Recognition Model, etc.
11.	Infrastructure (Server / Cloud)	Application Deployment on Local System / Cloud Local Server Configuration; Cloud Server	Local, Cloud Foundry, Kubernetes, etc.

Table-2: Application Characteristics:

S.No	Characteristics	Description	Technology
1.	Open-Source Frameworks	List the open-source frameworks used	Technology of Opensource framework

2.	Security Implementations	Sensitive and private data must be protected from their production until the decision making and storage stages	Node-Red, Open weather app API,MIT App Inventor
3.	Scalable Architecture	Scalability is a major concern for IoT platforms .It has been shows that different architectural choices for IoT platforms affect system scalability and that automatic real time decision making is feasible in an environment composed of dozens of thousand.	Technology used
4.	Availability	Automatic adjustment of farming equipment made possible by linking information like crops/weather and equipment to auto-adjust temperature, humidity, etc.	Technology used
5.	Performance	The idea of implementing integrated sensors with sensing soil and environmental or ambient parameters in farming will be more efficient for overall monitoring.	Technology used
